OdorKlenz: Where to Buy

One of the most frequently asked questions we receive is: Where can I buy your products? In addition to our websites, you can also find many of our consumer products for sale in stores in the great State of Kansas! These include: all Waters True Value stores, Hey Baby, Cary Company, Pet Life by Roberts, Inc., Pets N Stuff, and Manhattan Restaurant Supply. If you're an on-line shopper, be sure to check out our products on Alice.com as well as Amazon.com. You can learn more about where to buy our commercial products at www.OdorKlenz.com, as we are always adding new retailers.

NanoScale also has several distributors for our industrial products, including Enpac and ServiceMaster Clean in the United States and several international distributors. You can learn more about our distributors at www.NanoScaleCorp.com. Under the company page, select the "distributors" tab.

Featured Product: ChemKlenz

There are chemical hazards all around us – at work, hospitals, schools and colleges, even your home. This is why we created ChemKlenz, a chemical hazard neutralization system that can be implemented into these areas of our lives where chemicals are an unspoken threat.

ChemKlenz protects people and property from the damages chemicals can cause. ChemKlenz absorbs and neutralizes a wide range of toxic liquid and vapor spills and releases. For universities and other institutions we have developed the ChemKlenz Program, which is complete with a joint walk-through with one of our ChemKlenz experts, custom signage, training videos and demonstrations, and safety forms. ChemKlenz is available in a bottle that can be used directly on

liquid spills for the home.

Anyone can use ChemKlenz, there is no training required. ChemKlenz will work on a broad array of chemicals, avoiding the confusion of traditional spill kits.

Chemical spills are deadly. The ChemKlenz Program can save lives.

In the Spotlight: Analytical Services

In addition to offering our Customers a wide range of industrial and commercial solutions, NanoScale also offers state-of-the-art laboratory services. Dr. Janis Voo has been with NanoScale since 2003 working in our laboratories on a variety of projects and initiatives. Currently, he manages our Analytical Services department. Providing services to a variety of colleges, universities, and corporations, our Analytical Services team is able to process and analyze samples quickly and efficiently. Some of the procedures offered include X-Ray Diffraction, Elemental Analysis, FT-IR, Gas Sorption Analysis, Density Measurements, and Particle Size Analysis. The next time you are on our website (www.NanoScaleCorp.com). Click on the services page and then select the analytical services tab. There you will find a downloadable submission form.
